

- Every **F1** flow that arrives to SdnController will be processed by SDN_App1. Processing takes on average 1s. (In the future, DML will be queried to estimate processing time).
- Every **F2** flow that arrives to SdnController will be processed by SDN_App2. Processing takes on average 6s. (In the future, DML will be queried to estimate processing time)

Flows:

F1:

- source: App1
- destinations: App4

F2:

- source: App1
- destinations: App4

SW1 (SDN) switching modes:

F1:

- Hardware-table, probability: 0.9
- Controller, probability: 0.1

F2:

- Software-table, probability 0.9
- Controller, probability: 0.1
